

NDA Statement & Sourcing Policy

Dallmeier video technology is NDA-compliant

Dallmeier video technology stands for highest quality and cyber security “Made in Germany”. We were and are aware of the risks of globalization and geopolitics and always apply our own high quality and security standards to our entire supply chain during development.

NDA Compliance Statement

Dallmeier electronic GmbH & Co. KG confirms that all Dallmeier products and systems comply with the provisions of the US National Defense Authorization Act (NDA) and are NDA compliant.

Dallmeier Sourcing Policy

Development, Sourcing, Manufacturing and Privacy & Data Security

Development and manufacturing in Germany

Dallmeier develops and manufactures all camera and recording systems as well as software in Regensburg, Germany. The components of the Dallmeier camera and recording systems as well as the software are manufactured by Dallmeier certified companies within a radius of less than 200 km. However, some components can no longer be sourced regionally for quality or functional reasons. When “global sourcing” these components, we closely adhere to the strict German ISO specifications and conduct visits and audits at our suppliers several times a year.

Privacy & Security by Design

Dallmeier attaches significant importance to the IT security of its systems. For this reason, Dallmeier camera and recording systems only run software that we developed in-house. This applies to the application as well as the operating system and firmware level. In addition, all hardware and software systems are subjected to extensive security and penetration tests by independent external experts. Here, too, we attach foremost importance to Germany as a production location and as a democratic constitutional state with the highest data protection standards.
